

A photograph of an industrial refinery or chemical plant at dusk. The sky is a mix of blue and orange. Several tall distillation columns and towers are visible, some with red lights at their tops. The ground level is filled with complex piping, scaffolding, and numerous bright yellow lights that illuminate the scene. A large, dark blue rectangular box is overlaid on the left side of the image, containing white text.

Flow, Density and Viscosity Measurement

Best-in-class technology for outstanding results

Measurement stability and repeatability that stands up to even the most difficult application and process challenges.

Industry-Leading Flow Measurement Technologies

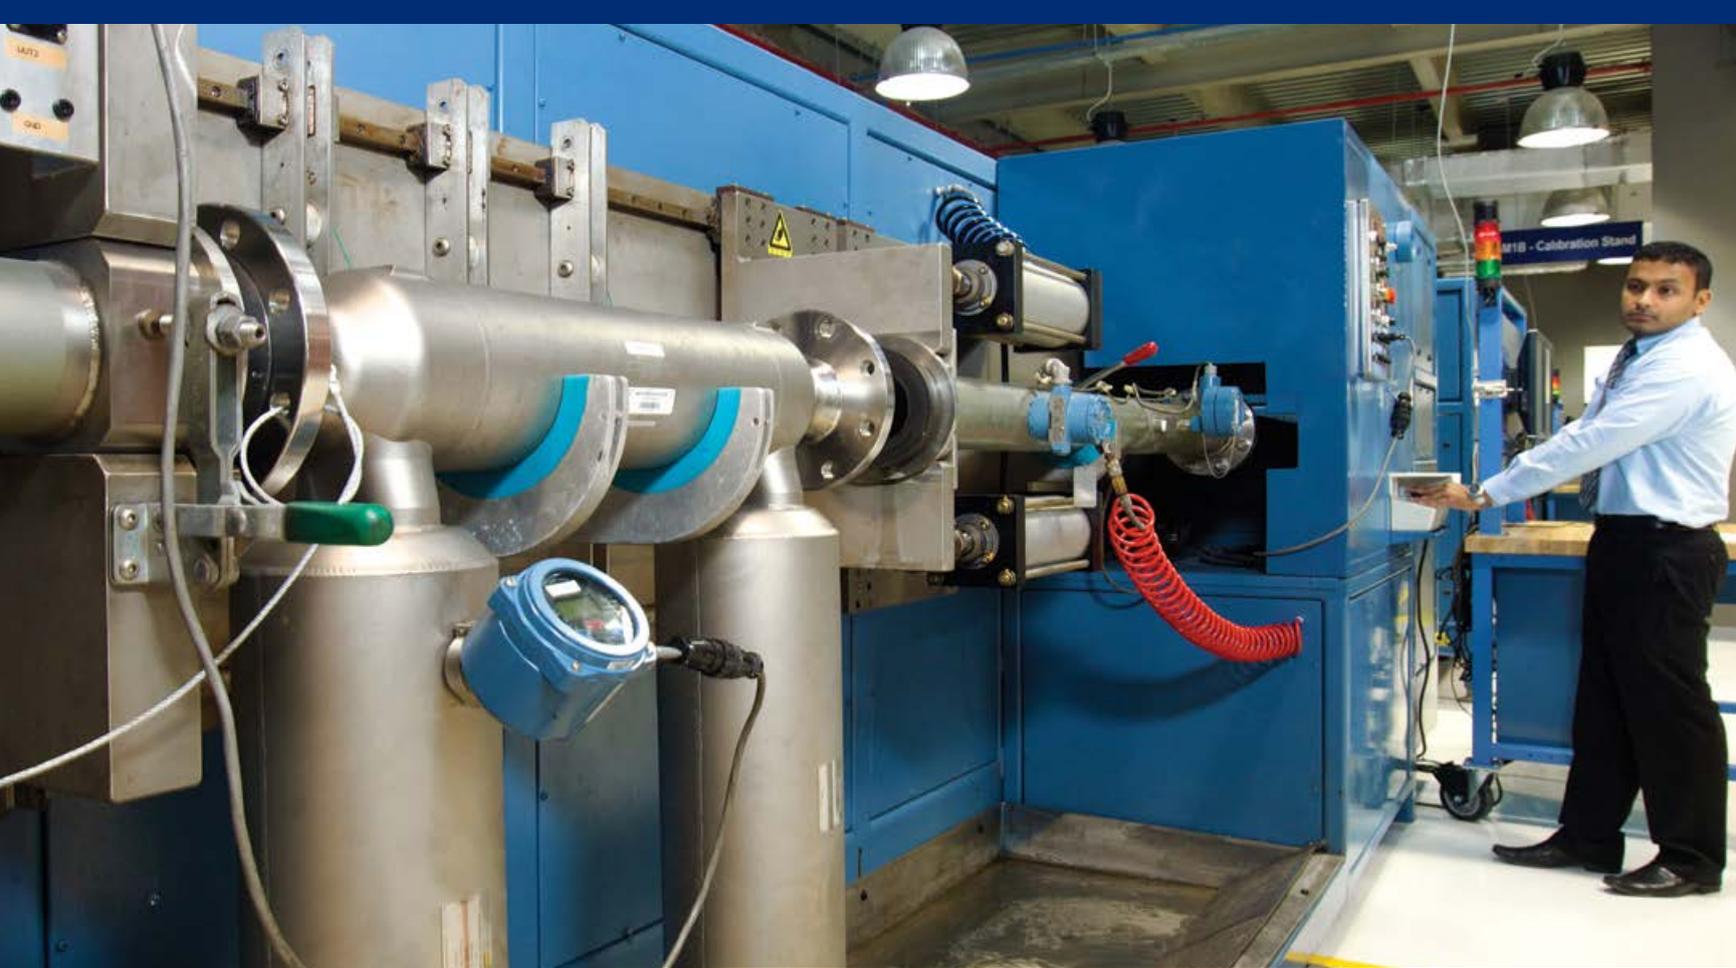

Emerson delivers outstanding results that ensure the success of your process and operation. We provide unmatched value with a wide breadth of products that include Coriolis, Magnetic and Vortex flow meters, as well as density and viscosity measurement.

Look closer to discover why Micro Motion® and Rosemount™ flow technologies are unmatched in the industry and what they can do.

Micro Motion and Rosemount flow and density measurement products are manufactured, calibrated and supported all over the globe. With highly accredited facilities and support services, Emerson global flow service and technology centers provide the highest quality engineering, production, service, training and calibration available.

Locations to serve you: Boulder, CO, USA • Eden Prairie, MN, USA • Sorocaba, Brazil • Nanjing, China • Pudong, China • Pune & Mumbai, India • Chiba, Japan • Chihuahua, Mexico • Ede, The Netherlands • Manila, Philippines • Chelyabinsk, Russia • Dubai, UAE • Slough, UK

From consultation to solution to optimization and beyond, we're dedicated to helping you find the right flow technology for your business needs.

Leading Technology

Through our world-class research and development capabilities, Emerson drives product development solutions and advanced diagnostic insights to help solve your process application challenges.

Product Breadth

Our extensive array of materials, configurations and electronics capabilities enable flexible and easy installation for every operating environment across a wide range of industries.

Unparalleled Value

Our application expertise covers more than 40 years of experience and more than 1,000,000 devices installed worldwide for proven reliability, performance and accuracy in any environment.

Global Support

With the largest team of technology experts around the world, Emerson is your partner for flow measurement solutions, allowing you to better manage your process and increase plant availability.

Micro Motion Coriolis Flow Meters

Simplified Solutions

- A broad range of simple-to-use, high-performance products that excel under the widest range of conditions and applications
- Simple integration through scalable transmitter platforms

Measurement Confidence

- High accuracy and repeatability over wide turndown ratios
- Simultaneous density and mass flow measurement to monitor your fluid quality and state

Process Insights

- Smart Meter Verification continually monitors in-situ meter health and performance
- Eliminates costly trips to the field for technicians, reducing proving and proof-test costs

Coriolis Overview

Emerson is dedicated to offering Micro Motion Coriolis products that deliver the three things that we believe are key to the success of your process: simplified solutions, measurement confidence and process insights.

Emerson offers a wide range of Coriolis flow meter products for any application — all of which are easy to install, configure and maintain. Not only do our products exhibit unparalleled real-world performance, but they also provide actionable insights that help you optimize your process and set you up for success.

To optimize your process and ensure that it is running smoothly, you need to have the right insights. Our technology and experts provide you with just that. Emerson technologies offer powerful integrated diagnostics that provide you with process data and actionable information, enabling you to make quick, effective decisions. With our meters, issues such as two-phase flow or corrosion can easily be detected and addressed.

Micro Motion Coriolis Sensor Portfolio

ELITE®

ELITE® Coriolis flow meters provide unmatched flow and density measurement performance for gas, liquid and multiphase applications.

F-Series

F-Series Coriolis meters deliver highly accurate mass, volume flow, and density measurement in applications that require a compact, drainable design.

H-Series

Sanitary and Hygienic H-Series meters offer highly accurate mass flow, volume flow, and density measurement in a compact, drainable and cleanable design.

R-Series

Low-footprint, drainable R-Series Coriolis flow meters provide accurate flow and density measurements and are ideally suited for general purpose applications.

TA-Series

TA-Series Coriolis Flow and Density meters have all wetted material constructed from pure tantalum and are ideal for handling corrosive fluids, such as acids and bases.

LF-Series

LF-Series meters are the smallest Coriolis meters available for low flow measurement needs. This meter fits into any tight space, providing a scalable platform for individual flow measurement needs.

T-Series

T-Series meters feature all titanium wetted parts for corrosion resistance and offer superior flow measurement in a straight-tube, full-bore meter design.

Micro Motion Coriolis Transmitter Portfolio

5700

5700 transmitters are full-featured, field-mount devices that deliver increased confidence in flow measurement with their advanced capabilities in meter verification, process data handling and entrained gas alerts.

Smart Meter Verification

Smart Meter Verification Basic verifies complete measurement performance across a Coriolis sensor and electronics and is automatically included with most transmitters. Smart Meter Verification Professional provides a simple path to instrument and process compliance. Smart Meter Verification integrates with digital automation hosts to enhance safety, maintenance and compliance programs.

1700 / 2700

1700/2700 field-mount transmitters are powered by MVD™ Technology and designed for compact integral mounting, or easily mounting on a wall or pipe stand.

4200

4200 transmitters offers highly accurate mass flow and density measurement in loop-powered applications – and without the need for additional power wiring.

2400S

2400S transmitters with MVD Technology deliver unsurpassed Coriolis performance in two-phase flow applications.

3500/3700

3000 electronics combine Coriolis transmitter functions and PLC capabilities in one instrument.

1500 / 2500

1500/2500 DIN rail-mounted transmitters are powered by MVD Technology and designed to easily fit into control room panels.

Filling Mass Transmitter (FMT)

The FMT Coriolis transmitter was specifically designed for filling and dosing applications to deliver outstanding performance in high speed and very small fills.

Compact Density Meter (CDM)

The Compact Density Meter (CDM) is the next generation in fiscal custody transfer and precision process density and concentration measurement.

Fork Density Meter (FDM)

The Fork Density Meter (FDM) is the latest development in direct insertion density and concentration. This meter builds upon the success of the Micro Motion 7826 and 7828 density meters.

Fork Viscosity Meter (FVM)

The Fork Viscosity Meter (FVM) is the latest development in multivariable direct insertion viscosity meters. These unique meters provide unbeatable installation flexibility, robustness and market-leading communications flexibility.

Gas Density Meter (GDM)

The Gas Density Meter (GDM) is the next generation in fast response direct gas density measurement. It's designed for applications such as fiscal custody transfer where reliability and accuracy are critical.

Gas Specific Gravity Meter (SGM)

The Gas Specific Gravity Meter (SGM) is the industry standard for direct measurement of specific gravity, molecular weight, relative density, Calorific Value/BTU and Wobbe Index.

Heavy Fuel Viscosity Meter (HFVM)

The HFVM Viscomaster is a high performance, multivariable viscosity meter designed for the measurement and control of heavy fuel oil (HFO) that supply engines, turbines and burners in Marine and Power applications.

Rosemount Vortex & Magnetic Flow Meters

Reliability By Design

- A unique all-cast, all-welded Vortex meter body design without ports or gaskets offers a reliable, non-clog solution for increased availability
- Dual compartment Magnetic transmitter housing and all-welded sensor prevent moisture ingress and maintain safe local configuration

Industry-Leading Performance

- Decrease downtime with Rosemount Vortex meters that offer no moving parts to maintain or repair and an online removable sensor
- A temperature characterization and verification process for Magnetic transmitters minimizes the effects of ambient temperature changes

Valuable Diagnostics

- Vortex diagnostic capabilities verify the meter health of critical sensing components to keep your process running
- Smart Meter Verification for Magnetic flow meters continually monitors meter performance without stopping the process

Vortex & Magnetic Overview

Emerson's Rosemount Magnetic and Vortex flow meters are designed to ensure your peace of mind and deliver complete confidence in every part of your process. These products offer reliability, industry-leading performance and valuable diagnostics.

We understand how important it is for you to be able to trust in every product you use, so we've designed our Magnetic and Vortex flow meters to deliver unmatched reliability.

Confidence in your measurement is key to your process. That's why we are dedicated to the pursuit of ultimate real-world performance, even in the most critical and complex applications. Whatever your measurement needs, you can trust our industry-leading products to deliver unparalleled accuracy.

Emerson technologies offer powerful integrated diagnostics that provide you with process data and actionable information, enabling you to make quick, effective decisions. Our diagnostic capabilities verify the meter health of critical sensing components to keep your process running and avoid unplanned shutdowns.

Rosemount Vortex Flow Meter Portfolio

Flanged

The Rosemount 8800 Flanged Vortex flow meter is ideal for all applications from general purpose to the most demanding application.

Reducer

The Rosemount 8800 Reducer Vortex flow meter handles lower flows better than any other Vortex meter. The common face-to-face dimension allows you to change the meter without impacting the piping layout.

Wafer

The Rosemount 8800 Wafer Vortex flow meter is a lightweight, cost-effective solution that is easy to install and ideal for utility applications.

CriticalProcess

The Rosemount 8800 CriticalProcess Vortex flow meter eliminates unnecessary process shutdowns, increasing availability without requiring bypass piping.

Dual/Quad

The Rosemount 8800 Dual and Quad Vortex flow meters are flanged flow meters with redundant electronics and sensors. Use these SIL certified flow meters for SIS and other applications where redundancy is critical.

Weld-End

The Rosemount 8800 Weld-End Vortex flow meter is directly welded into your process piping, eliminating flange gaskets. This is the only Vortex flow meter available with zero potential leak points.

MultiVariable

The Rosemount 8800 MultiVariable Vortex flow meter combines your temperature and flow devices into a single highly accurate instrument.

Threaded End

The Rosemount 8800 Threaded End Vortex flow meter simplifies installation with NPT threaded process connections which match existing threaded pipe unions.

Utility

The Rosemount 8600 Utility Vortex flow meter offers a cast construction to minimize potential leak points and is optimized for a variety of general purpose and utility steam applications.

Rosemount Magnetic Sensor Portfolio

8705 Flanged Sensor

An all-welded design ensures reliability in the harshest environments. A wide range of sizes, liners, and electrode material options are available to meet most process conditions.

8711 Wafer Sensor

An economical, compact, and lightweight alternative to flanged magnetic flow meters with included alignment spacers for easy installation.

8721 Hygienic Sensor

Specifically designed for food, beverage, and pharmaceutical applications that require reliable, safe, and hygienic operation.

8707 High Signal System

Achieve stable flow measurement in the most difficult high-noise applications while maintaining the benefits of DC technology.

8750W Utility Water System

A reliable, robust design makes this utility magnetic flow meter system ideal for water, wastewater, and utility flow applications.

Liner Options

PFA, PTFE, ETFE

Polyurethane

Neoprene

Linatex

Rosemount Magnetic Transmitter Portfolio

8712E

This remote-mount transmitter has an easy-to-use LOI with dedicated configuration buttons, and is available with Smart Meter Verification.

8732

This integral-mount transmitter with explosion-proof housing supports a variety of communication protocols and is available with Smart Meter Verification.

8712H

Designed to pair with the 8707, this transmitter provides increased signal strength, advanced signal processing, and superior filtering techniques for demanding slurry applications.

† Flow rate of product based on concentration. For example, in a dissolved sugar solution, the measurement is the flow rate of the sugar alone and in a net oil application the measurement is water alone or oil alone.

Known Globally for Quality, Reliability and High-Performance Results.

Emerson's Micro Motion and Rosemount flow technologies enable increased plant availability, decreased costs and enhanced safety. Emerson delivers application expertise, service and technical support not available elsewhere.
